14:332:453 Mobile App Engineering and User Experience

Course Catalog Description:
This class teaches essential principles, techniques, tools, and methods for designing and implementing robust mobile applications and user experiences. Students work in small collaborative design teams to propose, build, and document a project focused on mobile applications for (Android) mobile phones. Additional assignments include creating several small mobile applications such as context-aware applications. Students document their work through a series of written and oral proposals, progress reports, and final reports. Covers the basics of Android programming, cell phone localization, energy-efficiency, prototyping, security, user-centered design, and usability testing.

Pre-Requisite Courses:
14:332:351 or equivalent knowledge

Pre-Requisite by Topic:
1. Java Programming Methodology
2. Data Structures and Algorithms
3. Familiarity with Operating Systems

Textbook & Materials:

References:
[TBD] e.g. Prototyping with Tiny Fingers

Overall Educational Objective:
To introduce students to the development of mobile computing software and applications using Android as a reference platform and introduce mobile computing concepts from a programmer's perspective. To create a foundation for further study and professional practice in mobile software development.

Course Learning Outcomes:
A student who successfully fulfills the course requirements will have demonstrated:

1. An ability to develop both user-oriented and systems-oriented Android programs.
2. An ability to conduct user-centered design for mobile applications.
3. An ability to understand programming constraints with mobile platforms. Understanding how different program hierarchies affect energy-efficiency, user experience and security.
4. An understanding of the Android programming models and development tools.

How Course Outcomes are Assessed:
Practical home work assignments, midterm, final project

**Topics Covered in Classes:**
Class 1: Course Introduction; Mobile Applications and Android Overview  
Class 2: Android Programming Environment  
Class 3: Qualitative Data Analysis / Android Fundamentals  
Class 4: Mobile Design / Paper Prototyping  
Class 5: Mobile Location / Networking  
Class 6: Security  
Class 7: Energy-Efficiency  
Class 8: Field Evaluation  
Class 9: Final Project

**Computer Usage:**
Use of Android in homework assignments and exams.

**Laboratory Experiences:**
All homeworks and exams require use of the computer laboratory.

**Design Experiences:**
~80% Homework problems are design-oriented problems, which require students to design and implement computer programs that meet specified requirements.  
~80% problems in the Exams are design related.

**Independent Learning Experiences:**

**Contribution to the Professional Component:**
(a) College-level Mathematics and Basic Sciences: 0.0 credit hours  
(b) Engineering Topics (Science and/or Design): 3.0 credit hours  
(c) General Education: 0.0 credit hours  
Total credits: 3
