Contents

Preface ................................................................. xv

About the Author ......................................................... xvii

1. Introduction to Linear Systems ................................. 1
   1.1 Continuous and Discrete Linear Systems and Signals ...... 2
       1.1.1 Continuous and Discrete Signals and Sampling ........ 3
       1.1.2 Continuous- and Discrete-Time Systems ............. 5
   1.2 System Linearity and Time Invariance ..................... 13
       1.2.1 System Linearity ........................................ 13
       1.2.2 Linear System Time Invariance ...................... 16
   1.3 Mathematical Modeling of Systems ......................... 18
   1.4 System Classification ....................................... 24
   1.5 MATLAB System Analysis and Design ...................... 26
   1.6 Organization of the Text .................................... 27
   1.7 Summary ....................................................... 28
   1.8 References ..................................................... 29
   1.9 Problems ....................................................... 30

2. Introduction to Signals ............................................ 33
   2.1 Common Signals in Linear Systems ......................... 33
       2.1.1 Impulse Delta Signal .................................... 42
   2.2 Signal Operations .............................................. 51
   2.3 Signal Classification .......................................... 56
   2.4 MATLAB Laboratory Experiment on Signals ................ 58
   2.5 Summary ......................................................... 59
   2.6 References ....................................................... 62
   2.7 Problems ......................................................... 63

PART I — FREQUENCY DOMAIN TECHNIQUES

3. Fourier Series and Fourier Transform .......................... 73
   3.1 Fourier Series .................................................. 74
       3.3.1 From Fourier Series to Fourier Transform ............. 84
   3.2 Fourier Transform and Its Properties ..................... 86
       3.2.1 Properties of the Fourier Transform ................. 88
       3.2.2 Inverse Fourier Transform ............................. 104
3.3 Fourier Transform in System Analysis ........................................ 106
  3.3.1 System Transfer Function and System Response ..................... 107
  3.3.2 Frequency Spectra .................................................... 110
3.4 Fourier Series in System Analysis ......................................... 116
  3.4.1 System Response to Periodic Inputs .................................. 116
  3.4.2 System Response to Sinusoidal Inputs ............................... 121
3.5 From Fourier Transform to Laplace Transform ............................... 124
3.6 Summary ........................................................................... 128
3.7 References .......................................................................... 131
3.8 Problems ............................................................................ 132

4. Laplace Transform .................................................................... 143
  4.1 Laplace Transform and Its Properties ...................................... 144
    4.1.1 Definitions and Existence Conditions ............................... 144
    4.1.2 Properties of the Laplace Transform ............................... 146
  4.2 Inverse Laplace Transform .................................................. 157
  4.3 Laplace Transform in Linear System Analysis ............................ 165
    4.3.1 System Transfer Function and Impulse Response ............... 166
    4.3.2 System Zero-State Response ......................................... 170
    4.3.3 Unit Step and Ramp Responses ..................................... 173
    4.3.4 Complete System Response .......................................... 175
    4.3.5 Case Studies ................................................................ 179
  4.4 Block Diagrams ..................................................................... 183
  4.5 From Laplace to the $\mathcal{Z}$—Transform .................................. 189
  4.6 MATLAB Laboratory Experiment .......................................... 191
  4.7 Summary ............................................................................ 192
  4.8 References .......................................................................... 195
  4.9 Problems ............................................................................ 196

5. The $\mathcal{Z}$ Transform ................................................................. 209
  5.1 The $\mathcal{Z}$ Transform and Its Properties .................................. 209
  5.2 Inverse of the $\mathcal{Z}$ Transform ............................................ 222
  5.3 The $\mathcal{Z}$ Transform in Linear System Analysis .......................... 228
    5.3.1 Two Formulations of Discrete-Time Linear Systems ............ 228
    5.3.2 System Response Using the Integral Formulation ............... 232
    5.3.3 System Response Using the Derivative Formulation ............. 242
    5.3.4 Case Study: An ATM Computer Network Switch ................. 249
  5.4 Block Diagrams ..................................................................... 254
  5.5 Discrete-Time Frequency Spectra ........................................... 258
    5.5.1 System Response to Sinusoidal Inputs ............................... 260
## 6. Convolution and Correlation

6.1 Convolution of Continuous-Time Signals
   - 6.1.1 Graphical Convolution
6.2 Convolution for Linear Continuous-Time Systems
6.3 Convolution of Discrete-Time Signals
   - 6.3.1 Sliding Tape Method
6.4 Convolution for Linear Discrete-Time Systems
6.5 Numerical Convolution using MATLAB
6.6 MATLAB Laboratory Experiments on Convolution
   - 6.6.1 Convolution of Signals
   - 6.6.2 Convolution for Linear Dynamic Systems
6.7 Summary
6.8 References
6.9 Problems

## 7. System Response in Time Domain

7.1 Solving Linear Differential Equations
7.2 Solving Linear Difference Equations
7.3 Discrete-Time System Impulse Response
   - 7.3.1 Direct Method for Finding the Impulse Response
   - 7.3.2 Impulse Response by Linearity and Time Invariance
7.4 Continuous-Time System Impulse Response
7.5 Complete Continuous-Time System Response
7.6 Complete Discrete-Time System Response
7.7 Stability of Continuous-Time Linear Systems
   - 7.7.1 Internal Stability of Continuous-Time Linear Systems
   - 7.7.2 The Routh-Hurwitz Stability Criterion
   - 7.7.3 Continuous-Time Linear System BIBO Stability
7.8 Stability of Discrete-Time Linear Systems
   - 7.8.1 Internal Stability of Discrete-Time Linear Systems
   - 7.8.2 Algebraic Stability Tests for Discrete Systems
   - 7.8.3 Discrete-Time Linear System BIBO Stability
